I really like the look, and the mounting feet don't look half as bad as people make them out to sound without giving it a try. Very classy looking and well built. I only have it running active to my metal LPG tweets and my Vifa MG 4" mids and it sounds awesome. I got the burr brown upgrade too. It also really shows how poorly my recordings on mp3 are. And with the volume all the way up coming from my eclipse 8053 I hear no noise.</p>
