

UPS ground is nice. Got it in on Thursday. The amp is bigger than I thought and much heavier than I expected but that much power requires a fair amount of heat dissipation capabilities. Install went fine and was uneventful. After adjusting the gains from my Eclipse 8455, the Deuce made my Seas Lotus Excel W18's (8 ohm home driver) come alive. Very nice and clean sound. The amp isn't even trying! In my active setup, the tweeters were attenuated -12 db. Well, they are now zeroed out. Great amp, well made and a good price.
